

DriverPass System Analysis

Nicole Snyder

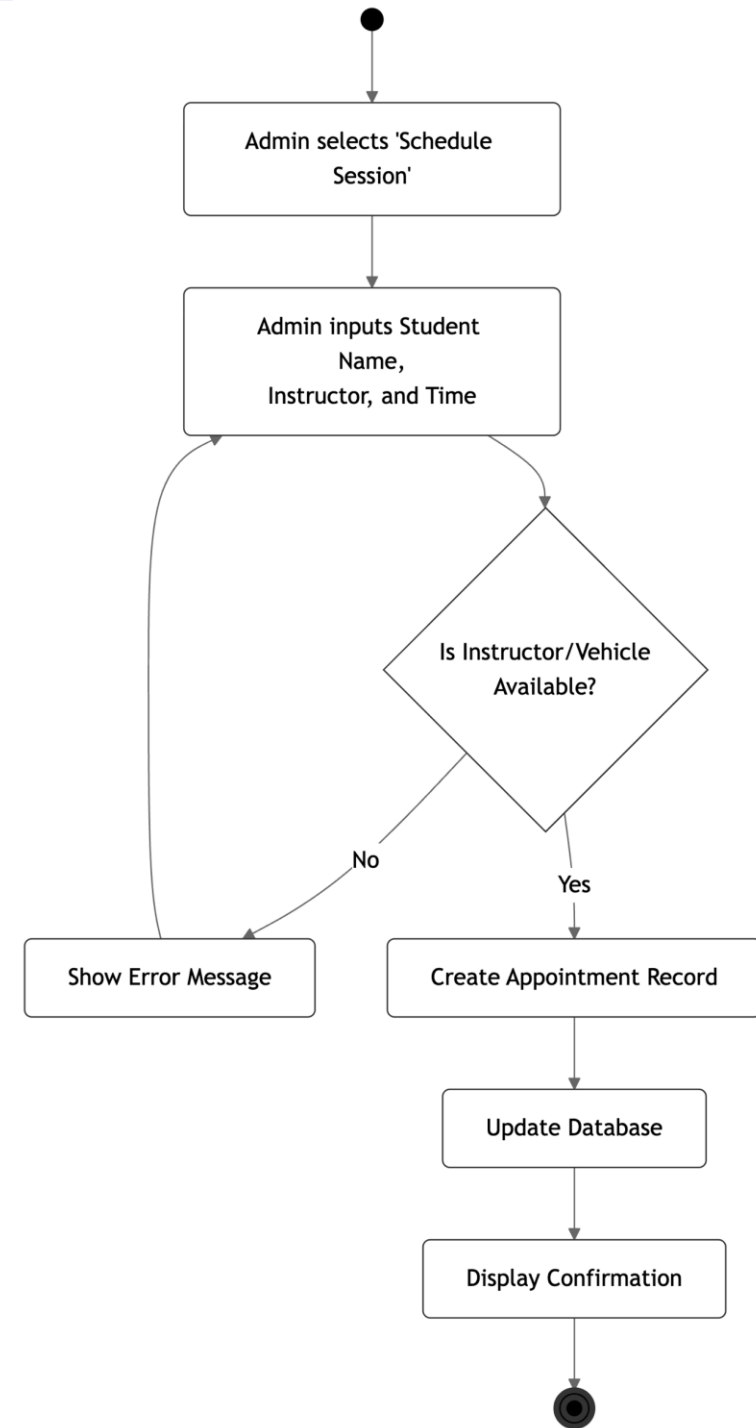

System Requirements

- Functional Requirement 1:** The system shall allow administrators to schedule driving sessions by selecting a student, instructor, and time block.
- Functional Requirement 2:** The system shall automatically verify instructor and vehicle availability before confirming any appointment.
- Non-functional Requirement 1:** The system must be web-based, accessible from any office computer without installing new software.
- Non-functional Requirement 2:** Student records must load within 2 seconds to ensure quick access for staff.

Activity Diagram

Security

- Secure Login:** Unique username and password required for all staff.
- Encryption:** All data is encrypted (SSL) so it cannot be intercepted.
- Brute Force Protection:** Accounts lock temporarily after 3 failed attempts.
- Access Control:** Only Admins can edit or delete historical records

System Limitations

- Payment Processing:** The system does not currently accept credit card payments; this must be done externally.
- Mobile App:** There is no dedicated mobile app for students to check their own schedules yet.
- Internet Reliance:** The system requires an active internet connection to function.
